MAKE A HERB GARDEN
WITH FLOWER

Ask an adult to help you get these things:

YOU WILL NEED:
• compost • pebbles • trowel • large flowerpot •
• watering can • some herb plants, like mint, basil, parsley or coriander •

1. First, spoon some pebbles into the bottom of your flowerpot. This will help make sure that the compost doesn’t wash away when you water the plants. They won’t be able to grow if this happens!

2. Next put in some compost to fill up about ¾ of the pot. The compost will give the herb plants the nutrients they need to grow.

3. Now you need to carefully remove the herbs from their original pots and plant them into their new one. Make sure you put the biggest plant in the middle of the compost.

4. When you have planted the herbs, push the compost down around them so that it’s tightly packed together. Add some more compost if you need to.

5. Keep the herb garden inside during the winter, making sure it has plenty of light. Remember to water your herbs regularly.
